

The mayflies of Greece (Insecta: Ephemeroptera) – A provisional check-list

ERNST BAUERNFEIND

Naturhistorisches Museum Wien, I. Zoologische Abteilung, Burgring 7, A – 1014 Wien, Austria
vogelsammlung@nhm-wien.ac.at.

Abstract

A provisional check-list for Greece is established based on mayfly material collected by H. Malicky between 1975 and 1999 and incorporating all previously published records.

A hitherto undescribed species, *Rhithrogena lisetae* sp.n., is included in the check-list (for the description see this volume p. 109-112). For *Ecdyonurus androsianus* stat. nov., and *Ecdyonurus vitoshensis* stat. nov., originally described as subspecies of *E. aurantiacus* and *E. carpaticus* respectively, specific rank is proposed. *Ephemerella hellenica* syn. nov. is considered to represent a junior synonym of *E. lineata*. *Serratella spinosa* (Ikonomov, 1961) sensu Jacob (1993) is not available (primary homonymy), and the replacement name *Ephemerella ikonomovi* Puthz, 1971 has to be used for this taxon irrespective of the generic combination preferred.

The present study increases the number of species known from Greece to 70, which may, as a very rough estimate, comprise about 60-70% of the mayfly fauna expected for the area. Although still insufficiently known, distribution patterns suggest a considerable number of species to represent taxa endemic to the Balkans, whereas only a minor percentage may be considered of euro-siberian distribution (compare Puthz 1980). These findings further stress the importance of the Mediterranean as a possible glacial refuge for freshwater benthic organisms, as proposed earlier by Zwick (1981) for stoneflies (Plecoptera). More systematic collections on a larger scale are urgently needed to clarify the taxonomic position of several taxa and to enable future faunistic research.

Keywords: check-list, Ephemeroptera, Greece, mayflies.

Introduction

Relatively little is known about the mayfly fauna of Greece and no major collections have been published so far. Since Puthz (1980) provided a first list enumerating 31 species another 15 taxa have been described from the area, almost all of them based on material collected by Professor Dr. Hans Malicky (Lunz). Scattered throughout various taxonomic papers, records for an additional 15 species have been published between 1981 and 1994.

Professor Malicky most kindly donated to the author a sample from his extensive collections (dating from 1975 – 1999), which was used for drawing up the provisional check-list presented below. The material contained about 250 specimens (mostly from light trap catches), representing 39 taxa from 71 sampling sites (mainland Greece) as well as from 12 stations on islands Kriti (Crete), Evvia (Euboea), Lesvos (Lesbos), Samothraki, Seriphos and Skiathos. Data concerning the identified species are detailed in the appendix (sampling localities, gazetteer), for geographic provinces and numbers of sampling stations see Fig. 1.

Fig. 1 - Geographic provinces and numbers of sampling stations (in brackets).

Material and Methods

[Abbreviations. m: male imago, f: female imago, SI: subimago, L: larva. Numbers in brackets: field numbers / sampling localities (H. Malicky), see appendix]

Baetis alpinus (26) m, (79) 2m, 2f, (439) 2L, (TC 2) m. *Baetis fuscatus* (303) m, (423) 3mSI, (430) 2mSI. *Baetis meridionalis* (316) 2L, (702) 2m, (703)m. *Baetis melanonyx* (433) 2L. *Baetis muticus* (27, 423) m, f. *Baetis cf. navasi* (K 105) m, mSI, fSI. *Baetis rhodani* (310) 2L, fSI, (418) 3mSI, (439) m, (546) 2m, 3L, (702) m, (703) m, (Str 8) L. *Centroptilum luteolum* (414) m, mSI, (421) fSI, (702) mSI, fSI. *Cloeon dipterum* (KK 1) m. *Oligoneuriella rhenana* (28) 3f, (422) 2m, 7f, (439) 2L, (446) m, f, (KA 7) L. *Epeorus cf. assimilis* (27) f, (306) m, (307) f, (308) 2L, (309) 2m, 2f, (TC 1) f. *Epeorus yougoslavicus* (TC 1) m, 2f. *Rhithrogena bulgarica* (410) m, (411) m, (413) m, f, (702) m. *Rhithrogena semicolorata* (18) m, (309) 2m. *Rhithrogena lisettiae* sp.n. (705) 3m, (707) m, f, (TC 2) m, f. *Ecdyonurus aurantiacus* (403) m, (512) m, (513) m. *Ecdyonurus epeorides* (419) mSI, f, (424) m, fSI. *Ecdyonurus graecus* (505) m. *Ecdyonurus insignis* (422) 2m, f, (432) 2m, 2f, (446) m. *Ecdyonurus krueperi* (1) m, mSI, f, fSI, L, (6) mSI, f, fSI, L, (301) m, f, (403)m, (433) m, f, L, (508) mSI, fSI. *Ecdyonurus moreae* (401) m, f, (406) m, f, (601) m, (702) m, f, (703) m, f. *Ecdyonurus vitoshensis* (309) m, ? (421) f, (440) m, L, (541) m, f, (546) f, (549) m. *Electrogena malickyi* (K 104) fSI, (K 105) mSI, f, fSI. *Electrogena cf. mazedonica* (411) m. *Electrogena hellenica* (27) mSI. *Choroterpes* ? *balkanica* (446) m, f. *Habroleptoides filipoviae* (10) 5m fSI, (403) m, (702) f. *Habroleptoides confusa* (26) m, mSI, f, fSI. *Habroleptoides malickyi* (71) m. *Habrophlebia eldae* (7) m, mSI, (10) 2m, 3fSI, (67) m, (402) 2mSI, fSI, (423) 3m, 5mSI, fSI. *Ephemera danica* (421) f, (423) m, f. *E. cf. parnassiana* (444) f. *Ephemera lineata* (315) f, fSI, (402) mSI, (422) mSI, fSI, (423) m, (427) f, (705) m, f, (TC 1) f, (TC 3) f, (E 82) L, (E 84) L. *Ephemerella ignita* (28) f, (403) fSI, (406) f, (421) fSI, (423) m, f, (601) mSI, f, fSI, (702) mSI, f, (TC 1) m, mSI. *Ephemerella ikonomovi* (702) f, (703) f. *Ephemerella major* (406) m, f. *Caenis macrura* (3) m, f, (28) m, f, (123) m, f, (211) m, f, (234) m, f, (406) m, (423) m, f, (446) m, f, (601) m, f, (Ser 22) m, f, (Ski 2) m, (Str 5) L, (Str 7) m, (Str 8) L. *Caenis pseudorivulorum* (420) m, f.

A few specimens (subimagines / females) from localities 5, 36, 417, 418, 435, 445, 451, 500, 516, 525, 535 (not listed in the gazetteer) could not be

identified on the species level and are therefore omitted from the list of material.

The check-list

All species recorded so far from Greece are listed in Table 1. Systematic arrangement is corresponding to Puthz (1980), nomenclature follows the guidelines adopted by Bauernfeind and Moog (2001), spelling of localities is according to The Times Atlas (1972). Type localities are quoted in a broad sense equivalent to geographical provinces. Sources for previous records (usually only the first record) are cited in full and species found in the present sample are marked by dots. For details and localities see appendix.

Remarks on selected taxa

Baetidae

Baetis digitatus has been recorded only once for Greece by Belfiore (1990). In his remarks on the material (nymphs) Belfiore pointed out some differences compared with the characters described in the revision by Müller-Liebenau (1969) and the specimens in question may eventually represent a hitherto undescribed species.

Baetis navasi is so far known only from Portugal. A single male imago (accompanied by two subimaginal specimens) from Prases, Kriti (Crete), agrees well with the description by Müller-Liebenau (1974), differing slightly from typical *B. muticus* (specimens from Austria and Greece). Considering the difficulties in separating the nearly allied and very similar representatives of the *B. muticus*-group in the Mediterranean (and in the absence of nymphs) identification remains altogether doubtful. Under these circumstances the taxon was provisionally identified sub *Baetis cf. navasi*, and entered on the check-list mainly to focus the interest of future research on specimens resembling the well known *B. muticus*.

Baetis meridionalis was hitherto only known from Ikonomov's descriptions (1954: larva, 1962: imago) and a provisional record for Albania (Puthz 1980, with a photograph of male genitalia / microslide). The material used for the check-list includes male imagines and last instar larvae that agree well with both descriptions. A more detailed analysis will be published elsewhere. Generic (or subgeneric) classification in the family remains widely controversial, for the check-list a more conservative approach has been used (see the discussion in Bauernfeind and Moog 2001).

Table 1 - The check-list

69. <i>Caenis strugaensis</i> IKONOMOV, 1961	Malzacher 1986: 10	
70. <i>Prosopistoma pennigerum</i> (MÜLLER, 1785)	Hoffmann 1994: 89 [sub <i>P. foliaceum</i> FOURCROY]	

Heptageniidae

Epeorus assimilis has recently been reinstated by Thomas *et al.* (2000, 2001) for populations north of the Pyrenees. Specimens from the material resembling this species (as well as *E. sylvicola* PICTET, 1865) have been listed provisionally sub *E. cf. assimilis* until the status of *E. sylvicola* and related taxa as well as the variation of characters in the genus are better understood.

The discriminating characters described by Braasch (1983) for *Ecdyonurus aurantiacus androsianus* (imagines and last instar larvae) have been compared with material of *Ecdyonurus aurantiacus* from Austria and mainland Greece. Considering current opinions within the genus the differences may well warrant recognition on the species level. Accordingly *Ecdyonurus androsianus* stat. nov. is proposed for the taxon described by Braasch (l.c.), known so far only from the island of Andros.

The characters described by Jacob and Braasch (1984) and Hefti *et al.* (1989, 1991) for imagines and last instar larvae of *Ecdyonurus carpathicus vitoshensis* may well warrant recognition on the species level. Based on specimens from Greece identified with this taxon specific rank for *Ecdyonurus vitoshensis* stat. nov. is proposed.

The insufficiently known taxon *Electrogena trimaculata* (IKONOMOV, 1963), described only in the male submarginal stage, may represent a junior synonym of *E. affinis*, as suggested earlier by Sowa (1974).

Electrogena mazedonica represents another rather poorly known taxon (compare Sowa 1974), described only in the larval and (male) subimaginal stage. A single specimen agreeing with the description and drawing by Ikonomov (1963) has been provisionally assigned to this species.

Leptophlebiidae

A male and female imago of *Choroterpes* (collected at Kalendini, Ipiros) could not be

assigned with certainty to any of the hitherto described species of that genus. The specimens may belong to *Ch. balcanica*, known so far only in the larval stage. In the check-list the specimens in question have provisionally been listed sub *Choroterpes cf. balcanica*; a drawing of the male genitalia was provided earlier (Bauernfeind, 1998).

Ephemeridae

Ephemera hellenica was described from a single female specimen from Zagora, Mt. Pelion (Pilion). A comparison of the description and drawings by Demoulin (1955) with material of *E. lineata* from Greece, France and Austria shows (despite a certain degree of variation, compare Pongrácz, 1923) no perceptible differences. In the check-list *Ephemera hellenica* DEMOULIN, 1955 (syn. nov.) is therefore considered to represent a junior synonym of *Ephemera lineata* EATON, 1870.

Ephemera parnassiana strongly resembles *E. danica* (as pointed out already by Demoulin 1958), and may well prove synonymous in the future. In the absence of sufficient material at present, a single specimen that agrees perfectly with the description and drawings by Demoulin (1958) has been provisionally listed under *Ephemera cf. parnassiana*. The taxon however remains doubtful and fresh material from the type locality (Polydroson, Parnassos) should be investigated.

Ephemerellidae

Jacob (1993) reinstated *E. spinosa* IKONOMOV, 1961 because of a new generic combination (transfer to *Serratella*). This opinion can not be maintained: *Ephemerella spinosa* IKONOMOV, 1961 represents a primary homonym of *Ephemerella spinosa* MAYO, 1951 [= *Caudatella hystrix* (TRAVER, 1934)] and is therefore permanently invalid (ICZN 2000, Article 57.2.). The only available name for "*Ephemerella spinosa* Ikonomov, 1961" is the replacement name *Ephemerella ikonomovi* PUTHZ, 1971, irrespective of the generic placement. Generic (or subgeneric) classification in the family remains controversial, for the check-list a more conservative approach has been used (compare Studemann and Landolt 1997; Bauernfeind and Moog, 2001).

Acknowledgements

I am greatly indebted to Univ. Prof. Dr. Hans Malicky (Lunz) for the kind donation of the material from Greece. My sincere thanks are due to our staff, who helped considerably in preparing the manuscript: Hans-

Martin Berg, Mag. Marianne Ullmann (library, EDV), Kriemhild Repp, Alice Schumacher (maps, photographs). Friedrich Stich (Ferlach) generously provided life photographs of mayflies and Prof. Dr. M. D. Larsen (Baden) gave his friendly advice in linguistic matters. Dr. Carlo Belfiore and Dr. Arne Haybach kindly drew my attention on some previously overlooked faunistic records. The author gratefully acknowledges the valuable support by the Museum of Natural History Vienna and the Austrian Ministry for Education, Science and Cultural Affairs (bm:bwk), who sponsored his attendance at the International Conference in Perugia.

Appendix

Sampling localities:

[Localities are grouped according to geographic provinces (bold type). O. (Oros) = mountains, P. (Potamos) = river. Numbers in brackets: field numbers / collecting sites, locality names as provided by Malicky, geographic ordinates see gazetteer. For difficulties concerning local names compare Malicky (1994)]

Ipiros: (1) Igoumenitsa, (3) Archangelos, (6) Krikelllos, (7) Loutros, (446) Kalendini, (508) Timfi O., Iliochori, (KA 7) Kalamas.

Panaitolikon: (12) Drimonas, (16) Krikellopotamos, (18) Mikro Chorino, (26) Agios Dimitrios, (27) Platana, (28) Mornos P., Dafni. **Western Thessalia:** (67) Ossa O., Katafigion, (71) Ossa O., Karitsa, (432) Katerini, Mavroneri P., (433) Ossa O., (999) East of Pilion (Pelion O.). **Sterea:** (10) Lake Trikhonis, (301) Elikon O., Agia Triada, (302) Elikon, Ag.Triada, (303) Vardhousia, Mornos P., (306) Vardhousia, Ath.Diakos, (307) Vardhousia, Koniakos, (308, 549) Vardhousia, Koniakos, (309, 546) Vardhousia, Kallion, (310) Vardhousia, Diakopion, (315) Vardhousia, Vlachovouni, Koupaki, (316) Pentalofon, (444) Timfristos, Agia Triada, (601) Ag.Triada. **Pindhos:** (79) Metsovon, (505) N-Katara pass, Milia, (702) Andusa, (703) Milea, (992) Gormos O., W- Oreokastron, Konitsa, (994) W- Peristeri, (995) E-Katara pass. **Makedhonia:** (234) Vernon O., Flamuria, (401, 402) Timfi O., Kipi, (403) Timfi O., Vrisochori, (404) Timfi O., Iliochori, (404) Timfi O., Skannellion, (410, 411) Smolikas, Samarina, (512, 513) Smolikas, Ag.Paraskevi, (412) Grammos, Pefkofito, (413, 414) Grammos, Pefkos, (418, 419) Vernon, Naoussa, (420) Strimon P. / Lake Volvi, (421) S- Rhodopi, Sminthi, (422, 423) W- Rhodopi, Prasinada, (424) W- Rhodopi, Kriavrisi, (427) W- Rhodopi, Nestos P., Potami, (430) Pieria O., N-Olymbos. **Chalkidiki (Khalkidhiki):** (996) Cholomos O., W-Arnea, (997) Stratoniiko O. **Thraki:** (211) Avandos. **Peloponnisos:** (439) R. Erimanthos, Desion, (440) Chelmos O., Saruchla, (541, 705, 707) Taiyetos, Poliana, (TC 1, TC 2, TC 3) Taiyetos [Christensen leg.].

Islands:

Euboea (Èvvia): (E 82) Kutrulo, (E 84) Ano Steni. **Crete (Kriti):** (K 104) Dris, (K 105) S-Prases, (K 992, KK 1) Kastellakia. **Lesbos (Lesvos):** (L 13) Ag. Paraskevi. **Seriphos:** (Ser 22) Koutalas. **Skiathos:** (Ski 2) Kechries cove. **Samothraki:** (Str 5) Katsabas P., Kamariotissa, (Str 7) Agistros P., Akra Agistros, (Str 8) Fonias P.

Gazetteer

[Field numbers for sampling sites (bold print, in brackets), locality names and geographical ordinates as provided by Malicky, elevation above sea level in meters, date of collection.]

(1) Igoumensita 20°19' E / 39°15' N, 10m NN, 19.5.1987 (3) Archangelos 20°19'/37°07', 80m, 20.5.1987 (5) Revmatia 20°43'/39°17', 480m, 21.5.1987 (6) Krikello 21°13'/38°57', 150m, 22.5.1987 (7) Loutros 21°11'/38°57', 20m,

22.5.1987 (10) Mirtia 21°37'/38°35', 130m, 23.5.1987 (12) between Drimonas and Thermos 21°40'/38°36', 350m, 23.5.1987 (16) Krikellopotamos 21°41'/38°46', 370m, 24.4.1987 (18) Mikro Chorino 21°44'/38°50', 650m, 25.5.1987 (26) Ag. Dimitrios 21°51'/38°39', 720m, 26.5.1987 (27) Platana 21°49'/38°34', 300m, 26.5.1987 (28) Dafni 21°53'/38°28', 60m, 26.5.1987 (36) Mouriatada 21°43'/37°14', 340m, 2.6.1987 (67) Katafigion 22°42'/39°50', 1200m, 12.6.1987 (71) between Melivia and Karitsa 22°48'/39°47', 440m, 13.6.1987 (79) Metsovon 21°07'/39°49', 1350m, 14.6.1987 (203) Kapandriti 23°54'/38°13', 300m, 13.5.1989 (211) Avandas 25°54'/40°58', 200m, 29.5.1989 (234) Flamuria 22°00'/40°45', 400m, 9.6.1989 (301) Ag. Triada 22°54'/38°21', 460m, 17.5.1990 (302) Ag. Triada 22°55'/38°22', 250m, 17.5.1990 (303) Kato Musiotitsa 22°13'/38°41', 600m, 18.5.1990 (306) Ath. Diakos 22°10'/38°43', 1000m, 19.5.1990 (307) Kato Musiotitsa 22°11'/38°14', 900m, 19.5.1990 (308) Koniakos 22°11'/38°40', 1000m, 20.5.1990 (309) Kallion 22°11'/38°34', 400m, 20.5.1990 (310) Diakopion 22°07'/38°35', 400m, 20.5.1990 (315) Koupaki 22°01'/38°30', 260m, 21.5.1990 (316) Pentalofon 21°12'/38°29', 0m, 22.5.1990 (401) Kipi 20°48'/39°51', 700m, 10.7.1991 (402) Kipi 20°47'/39°52', 700m, 10.7.1991 (403) Vrisochori 20°54'/39°56', 1200m, 11.7.1991 (404) Iliochori 20°54'/30°57', 1100m, 11.7.1991 (406) Skannellion 20°53'/39°55', 1000m, 11.7.1991 (410) Samarina 21°00'/40°08', 1500m, 12.7.1991 (411) Samarina 21°00'/40°08', 1550m, 12.7.1991 (412) Pefkofito 20°58'/40°18', 1000m, 13.7.1991 (413) between Pefkofito and Pefkos 20°55'/40°18', 1200m, 13.7.1991 (414) between Pefkofito and Pefkos 20°55'/40°18', 1200m, 13.7.1991 (417) Drosopigi 21°24'/40°38', 1750m, 15.7.1991 (418) Naoussa 21°57'/40°40', 1500m, 15.7.1991 (419) Naoussa 21°57'/40°40', 1500m, 15.7.1991 (420) Rendina 23°39'/40°40', 0m, 16.7.1991 (421) Sminthi 24°48'/41°15', 450m, 17.7.1991 (422) Prasinada 24°32'/41°20', 300m, 18.7.1991 (423) Prasinada 24°32'/41°20', 300m, 18.7.1991 (424) Kriavrisi 24°19'/41°30', 1400m, 19.7.1991 (427) Nestos 24°05'/41°23', 300m, 20.7.1991 (430) Pierias O. 22°12'/40°16', 1600m, 26.7.1991 (431) Pierias O. 22°13'/40°16', 1400m, 26.6.1991 (432) Mavroneri 22°25'/40°16', 100m, 27.7.1991 (433) Apataniana P. 22°42'/39°50', 1200m, 28.7.1991 (435) Gardikion 21°57'/38°49', 900m, 30.7.1991 (439) Desinon 21°58'/37°55', 650m, 1.8.1991 (440) Saruchla 22°16'/37°58', 1200m, 2.8.1991 (442) Ag. Nikolaos 21°36'/38°54', 350m,

5.8.1991 (**444**) Ag. Triada 21°50'/38°58', 850m,
