The genus group name *Monophyllus* Kluge, 2012 was established to include a single species of the mayfly family Leptophlebiidae (Insecta: Ephemeroptera) from Hainan Island, China, *Choroterpes* (*Monophyllus*) *monophyllus* Kluge, 2012. Unfortunately, this name is preoccupied by *Monophyllus* Leach, 1821, a genus of Phyllostomidae bats (Mammalia: Chiroptera) from the Antilles (type species: *M. redmani* Leach, 1821: 76). Therefore, we propose a replacement name for the mayfly genus group as follows.

#### ***Monochoroterpes*, nom. nov.**

Type species: *Choroterpes monophyllus* Kluge, 2012: 297

= *Monophyllus* Kluge, 2012:296 nec *Monophyllus* Leach, 1821:75

**Etymology.** The name is a combination of *Mono-*, a reference to the type species *C. monophyllus*, and *-Choroterpes*, a reference to the generic attribution of the type species.
